

Integrate access control
and time recording directly in
SAP® SuccessFactors

Simple and secure with jay cloud

The cloud-based **jay cloud** software solution enables you to easily organize and manage all your access control and time recording tasks in your SAP system. You control these critical and sensitive business tasks with maximum ease and highest security in the SAP SuccessFactors Employee Central, SAP's cloud solution for human resources management.

jay cloud connects the entire dormakaba product portfolio with SAP SuccessFactors, combining the strengths of the two leading providers of ERP software and access and security solutions:

SAP and dormakaba

Co-Innovated with SAP

The jay cloud solution was co-developed as a solutions extension for SAP SuccessFactors together with the SAP Co-Innovation team. The application is certified by SAP.

SAP Certified
Built on SAP Business Technology Platform
SAP® Certified
Integration with Cloud Solutions
Co-Innovated with SAP®

Available in the SAP Store

Partnership with SAP

As a long-standing SAP partner, we offer you a tailor-made solution for your company. Benefit from the complete integration of your processes in your SAP system and thus from central data storage as well as automatic and error-free data exchange.

The most important advantages at a glance

Seamless integration into SAP SuccessFactors

Companies can easily manage their entire time recording, access control and visitor management in SAP SuccessFactors Employee Central - with one solution instead of many isolated applications. This allows companies to make optimum use of their SAP system.

Role-based access rights

Access authorizations can be managed directly and in real time from SAP SuccessFactors. Access rights are assigned automatically based on the roles and functions of employees in the company. If employees' roles change, their access rights change automatically and immediately.

Development and operation on the SAP Business Technology Platform

The SaaS application (Software as a Service) meets the highest IT security requirements. jay cloud supports your company in its digital transformation.

Time recording - simple, accurate and audit-proof

With jay cloud, employees can record their times wherever they occur: on the road or in the office, at a terminal, with a smartphone or automatically when opening a door. The time events are transferred to the HR system in real time and are available there for precise payroll accounting.

Tailored hybrid solutions for your journey to the cloud

With jay cloud, companies can operate all HCM on-premise and on-demand solutions in parallel (e.g. if individual locations have already switched to SAP SuccessFactors while others continue to work with SAP HCM). This is how we support companies in consolidating their HCM structure.

Worldwide service and sales

Thanks to our partner concept with dormakaba and our cooperation with SAP and SAP consulting firms, we guarantee a worldwide service.

More than just an application - central all-round service

We ensure central monitoring and maintenance of systems and connected devices with the integrated service portal. Via our customer portal, we keep in continuous contact with our customers and partners.

Investment security and future viability

SAP is the world's leading provider of ERP software. dormakaba is the leading manufacturer of security solutions. Both companies stand for innovation, customer focus and long-term strategies.

Multiple requirements - one solution

Easy operation, maximum flexibility and security – jay cloud facilitates access control and time recording significantly and gives you peace of mind, knowing that you have everything under control. From HR to IT and security and from the boardroom to every last person in the company.

Benefits for the management

- More security and transparency, less costs
- A central, international and company-wide solution
- High investment security and sustainability
- jay cloud is a part of the SAP digital strategy

Benefits for HR managers

- All time and access processes can be controlled directly and automatically in SAP SuccessFactors
- Reduced effort for personnel administration
- No duplicate master data maintenance
- Reduced workload thanks to ESS functions (Employee Self-Service)
- Familiar graphical SAP SuccessFactors user interface

Benefits for IT managers

- Full control thanks to a standardized system – fewer interfaces, no island solutions
- Efficient use of SAP systems and infrastructure
- SAP IT security
- Certified interfaces
- Reduced effort for maintenance, support and training
- Competence and own ability to act within the SAP system
- Flexibility and expansion friendliness

Benefits for security managers

- Intelligent and scalable access management system with a variety of functions and interfaces for additional systems
- Central monitoring - up-to-date data at all times
- Access to the system at any time and from anywhere
- Increased security for buildings, people and IT
- Integration of the entire dormakaba innovation portfolio, including mobile access
- Comprehensive media management - RFID, biometrics, mobile access

Advantages for employees

- Easy-to- use access components and time recording terminals
- Employee self-service functions
- Web terminal, authorization requests and time corrections
- Flexible and fast issuing of authorization rights
- Familiar graphical SAP SuccessFactors user interface

The three modules of jay cloud

Time

In cooperation with SAP, we have developed jay cloud, a solution for time recording and for integrating time recording terminals. Thanks to the latest technology based on the SAP Business Technology Platform, it offers maximum security and is therefore the ideal complement to time management with SAP SuccessFactors.

Times and activities are recorded where they occur - on the move or in the office, at the time recording terminal, with a smartphone, in the browser or automatically when opening a door.

jay cloud time creates a solid foundation for efficient time management, even with flexible working time models. You always have an overview of time balances, absences and overtime.

Access

Employee access rights are managed directly and in real time in SuccessFactors. They are based on the position and role that employees have in the company. If their roles change, the corresponding access rights change automatically and immediately. The HR department or security officer can easily and conveniently define and assign rights in jay cloud.

The link via SAP IoT (Internet of things) services ensures smart reader-based passage through all types of access from simple doors to pedestrian flow control turnstiles and gates. These smart readers can be connected to other devices such as a video camera or sensors.

Visitors

jay cloud visitor management provides extensive functions for visitor planning, check-in and check-out as well as for managing and analyzing visitor data. Visitors are issued with personal ID cards on arrival, which already contain all the necessary access authorizations. Precise access control allows free and secure visitor traffic with restrictions to specific times and room zones.

The most important apps at a glance

Master data management. The user has an overview of the entire hierarchical organizational structure as well as the time and access authorizations of the company and can build up or trace the objects and their relationships to each other in a tree structure.

Employee management. This app is designed primarily for HR managers and employees. The app enables HR managers to quickly and easily assign access profiles and identification media to employees and manage their data, media and access rights. Employees get a quick overview of the relevant master data, current and future access authorizations as well as ID cards and other access media.

Attendance board. This app provides an overview of the attendance status of all employees and external persons. The status is determined based on the last time or access bookings. The overview can be limited to specific rooms, zones, buildings or locations.

Web Terminal - time recording "on the go".

The Web Terminal works like a physical time recording terminal - on a smartphone or desktop computer.

All bookings for the day can be displayed in the web terminal - optionally including balances. The recorded time events are immediately transferred to the SAP SuccessFactors Time Sheet or another connected time management system.

Booking monitor for all time and access bookings.

Overviews, reports and evaluations of all time and access bookings are called up here. Shift reports are also available.

Evacuation list. In emergency situations, it provides a quick overview of the people who are in a particular room zone. It is based on the last access bookings of all persons. The generated lists can be printed out or sent to an e-mail distribution list, e.g. the fire department. The lists can be used at the collection point to check attendance.

Hardware components for jay cloud

We recommend dormakaba hardware for time recording and access control

Time recording

The small dormakaba terminal 96 00 with its touch-sensitive 4-inch display is designed for the standard scope of time recording. The dormakaba terminal 97 00 with its 7-inch display and many options is suitable for users who expect more than just time recording.

Access control

The hardware solutions for access control include components such as access readers, electronic and mechatronic door fittings and a wide range of media.

IoT Gateway

The IoT Gateway connects the access and time recording hardware to jay cloud via the SAP IoT services. This ensures that the existing infrastructure can be used without a local server installation.

Fact check: What is a real cloud-native solution?

- ✓ jay cloud is a multi-tenant Software as a Service (SaaS) application. It is based on the SAP Business Technology Platform, Cloud Foundry Environment.
- ✓ Each customer has its own sub-account on the SAP Business Technology Platform - with its own isolated database area.
- ✓ The customer benefits from the high level of investment and the high speed of innovation with which SAP continues to expand its cloud platform.
- ✓ The regular updates, extensions and security patches are always available immediately. Version upgrades take place without downtime. Devices and applications are always up to date.
- ✓ jay cloud is certified by SAP and undergoes regular vulnerability and penetration tests.
- ✓ Highest availability of the cloud solution, with the additional option of offline operation of the devices in the event of network problems
- ✓ Data is stored in accordance with the EU's strict data protection guidelines (GDPR).
- ✓ The company does not need to provide any IT infrastructure - the devices communicate directly with the cloud (only firewall settings are required).
- ✓ jay cloud can only be accessed via a web browser. No software installation is necessary.
- ✓ Login is simple and secure via the customer's corporate identity provider (IDP) and single sign-on.
- ✓ Access to jay cloud is possible anytime and anywhere - from a computer, tablet or smartphone or via a time terminal.
- ✓ Central device management - monitoring of all devices, services and interfaces in jay cloud
- ✓ Proactive monitoring and maintenance by the Poksundo operating and support team.
- ✓ jay cloud is another building block in your company's digital strategy.

A native cloud solution ensures maximum IT security.

The principles of SAP security

jay cloud is developed and operated on the SAP® Business Technology Platform.

- SAP's data centers are subject to high security standards and are certified in accordance with ISO 27001.
- SAP does not transfer any customer data outside the defined area and does not pass on any information to unauthorized third parties.
- All SAP Data Centers are under video surveillance around the clock and are protected by security personnel.

Open for third-party systems

Integration of third-party systems

jay cloud is an open modular system.

Third-party systems such as alarm systems, video management and building information systems can be easily integrated and orchestrated via the SAP Business Technology Platform.
