jay cloud

Easy and secure with jay cloud

Full integration of time recording and access control in Workday HCM

The cloud-based **jay cloud** software solution enables you to easily organize and manage all your access control and time recording tasks in your HR system. You control these critical and sensitive business tasks with maximum ease and highest security directly in **Workday**'s innovative cloud HCM solution.

jay cloud connects the entire dormakaba product portfolio with Workday, combining the strengths of two leading providers of ERP software and time, access and security solutions: **Workday and dormakaba**

The benefits at a glance

Seamless integration in Workday

Companies can easily manage their entire time recording, access control and visitor management in Workday - with one solution instead of many isolated applications. This allows companies to make optimum use of their Workday system.

Genuine cloud solution

jay cloud is a cloud-native solution based on a modern microservices architecture. The solution runs on a business cloud platform that meets the **highest IT security standards.**

More than just an application - central all-round service

We ensure central monitoring and maintenance of systems and connected devices with the integrated service portal. Via our customer portal, we keep in continuous contact with our customers and partners.

Worldwide service and sales

Thanks to our partner concept with dormakaba and our cooperation with Workday and Workday consulting firms, we guarantee a worldwide service.

Investment security and future viability

Workday is a leading provider of HCM solutions. dormakaba is a leading manufacturer of security hardware solutions. Both companies stand for innovation, customer focus and long-term strategies.

Time recording - simple, accurate and verifiable

With jay cloud, employees can record their times wherever they occur: on the road or in the office, at the terminal, with their smartphone or automatically when they open a door. The time events are transferred to the HR system in real time and are available there for precise payroll accounting.

Access control - reimagined

jay cloud ensures that employees can move freely within the company according to their tasks and are always secure and protected without being restricted by a rigid access system. Access authorizations are automatically assigned or changed based on the employee's role as early as the onboarding process and with every change of position right through to leaving the company.

jay cloud modules

Add useful functionality to your HR system and create added value

### jay cloud TIME   time tracking – precise and secure

Simplify your HR processes with seamless integration of time tracking into your HR system.

Times and activities are recorded at the time terminal, via smartphone or automatically when the door is opened. Time events are transmitted to the HR system in real time. Errors are reduced through correction options and plausibility checks. This allows working hours to be recorded accurately and flexibly.

For more information, please refer to the **jay cloud TIME** factsheet.

jay cloud ACCESS   dynamic access control
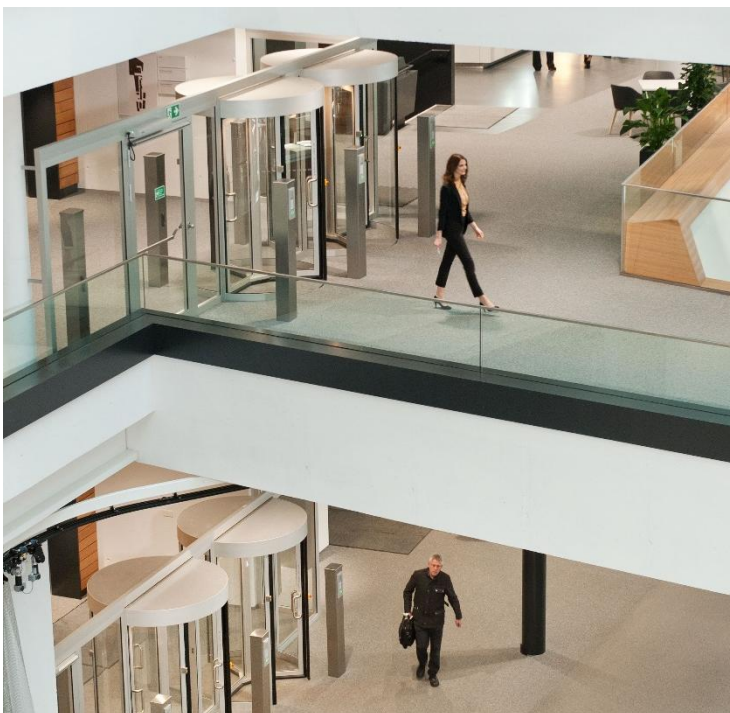

Manage access rights directly from your HR system.

Access rights follow the employee and are based on their position and qualification in the company. If an employee's role changes, their access rights change automatically and immediately. These are conveniently defined and assigned in jay cloud by the HR department or security officers.

For more information, please refer to the **jay cloud ACCESS** factsheet.

jay cloud VISITOR   visitor management

The solution provides a comprehensive range of functions for planning visits, checking in and out, and managing and analyzing visitor data.

On arrival, visitors are issued with a badge that already contains all the necessary access rights. Precise access control allows visitors to move around freely and safely, with restrictions to certain times and room zones.

For more information, please refer to the **jay cloud VISITOR** factsheet.

jay cloud LIFE SAFETY   evacuation management

You always know who is on your premises. And with the integration of time and attendance and access control, you are fully prepared for emergencies.

In the event of an emergency, the system enables fast and orderly evacuation: people are immediately registered as safe at assembly points, while the last known location of missing persons provides valuable assistance to emergency services. The result is safety and efficiency when every second counts.

For more information, please refer to the **jay cloud LIFE SAFETY** factsheet.

jay cloud standard apps at a glance

Master Data Management. The user has an overview of the entire hierarchical organizational structure as well as the time and access authorizations of the company and can build up or trace the objects and their relationships to each other in a tree structure.

Employee Management. The app allows HR managers to quickly view relevant employee master data and quickly and easily assign access profiles and badges.

Booking Viewer. This is where you will find overviews, reports and evaluations of all time and access bookings. The following booking evaluations are available: all time events and time pairs, all access bookings, shift report

Security Manager Workplace provides a wide range of reports on people, profiles, media, zones and last bookings for people with security tasks or in the reception area of a company.

Attendance Board. The app provides an overview of the attendance status of all employees and external persons. The status is determined based on the last time or access bookings. The overview can be limited to specific rooms, zones, buildings or locations

Map- and Floor Plan Viewer
The map viewer allows graphical navigation within a company – from the site plan to the individual device. This way, a system can be monitored from the entire company or countries down to the site, building, room or individual device.

Hardware components for jay cloud

We recommend dormakaba hardware for time and attendance and access control

Time and attendance

The small dormakaba terminal 96 00 with its 5" touchscreen, the dormakaba terminal 97 00 with its 7-inch display and the responsive terminal 9800 with its extensive, customizable interface offer many other options in addition to pure time recording. A wide range of identification options such as smartphone, RFID and optional biometric input ensure secure and customizable time recording and access control.

Access control

The hardware solutions for access control include components such as access readers, electronic and mechatronic door fittings, a wide range of user media and card readers.

IoT Gateway

The IoT gateway connects all devices to jay cloud. It enables secure access to the devices - for commissioning, support, maintenance and analysis. It offers additional offline functions for time and access in the event that the cloud connection is unavailable.

A solution **that satisfies everyone**

From HR and IT to security and from management to every single person in the company - ease of use, great flexibility and maximum security. jay cloud makes access control and time tracking a lot easier and gives you the peace of mind that everything is under control.

Benefits for the management

- More security and transparency, lower costs
- A central, international and company-wide solution
- High investment security and future viability
- jay cloud is a building block of a cloud strategy

Benefits for HR managers

- All time and access processes directly and automatically from the HR system
- Reduced effort for personnel administration
- No duplicate master data maintenance
- Reduced workload thanks to ESS functions (Employee Self-Service)

Benefits for IT managers

- Full control thanks to a standardized system - fewer interfaces, no isolated solutions
- Highest IT security based on a business cloud platform
- Reduced effort for maintenance, support and training
- Flexibility and openness for extensions

Benefits for security managers

- Intelligent and scalable access management system with a wide range of functions and interfaces for additional systems
- Central monitoring - up-to-date data at all times
- Access to the system at any time and from anywhere
- Increased security for people, buildings and IT
- Integration of the entire dormakaba innovation portfolio
- Media management - RFID, biometrics, mobile access

Benefits for employees

- Easy-to- use access components and time recording terminals
- Employee Self Service functions
- Web terminal, authorization requests and time corrections
- Flexible and fast assignment of authorizations
- High level of transparency

Fact check "Cloud Native"

What is a true cloud-native solution?

➤ jay cloud is a multi-tenant Software as a Service (SaaS) application. It is based on the SAP Business Technology Platform, Cloud Foundry Environment.

➤ Each customer has their own sub-account - with its own isolated database area.

➤ The regular updates, extensions and security patches are always available immediately. Version upgrades take place without downtime. Devices and applications are always up to date.

➤ Highest availability of the cloud solution, with the additional option of offline operation of the devices in the event of network problems

➤ Data is stored in accordance with the EU's strict data protection guidelines (GDPR).

➤ The company does not need to provide any IT infrastructure - the devices communicate directly with the cloud (only firewall settings are required).

➤ jay cloud can only be accessed via a web browser. No software installation is necessary.

➤ Login is simple and secure via the customer's corporate identity provider (IDP) and single sign-on.

➤ Access to jay cloud is possible anytime and anywhere - from a computer, tablet or smartphone or via a dormakaba terminal.

➤ Central device management - monitoring of all devices, services and interfaces in jay cloud

➤ Proactive monitoring and maintenance by the Poksundo operating and support team.

➤ jay cloud is another building block in your company's digital strategy.

A genuine cloud solution ensures maximum IT security.
